Product Description

BÖHLER S705 – "The industrial one"

The conventional high-speed steel for industrial applications in machining. With a well-balanced alloy position and cobalt content, this type always manages to get the job done. Cobalt-alloyed molybdenum high-speed steel with high hardness, excellent cutting properties, outstanding compressive strength, high hot hardness, and good toughness.

Process Melting

Airmelted

Properties

- Toughness & Ductility : good
- Wear Resistance : high
- Compressive strength : very high
- Edge Stability : high
- Grindability : good
- Hot Hardness (red hardness) : very high

Applications

- Broaches and Reamers
- Twist Drills and Taps
- End Mills
- Special Cutting Tools
- Gear Cutting, Shaving and Shaping Tools
- Blades for Sawing Machines

Delivery condition

Annealed

Hardness (HB)	max. 280 | drawn execution max. 290HB
Tensile Strength (N/mm²)	max. 980

Heat treatment

Annealing

Temperature	770 to 840 °C	Controlled slow cooling in furnace (10 to 20°C/h / (50 to 68°F/h)) to approx. 600°C (1112°F), air cooling.

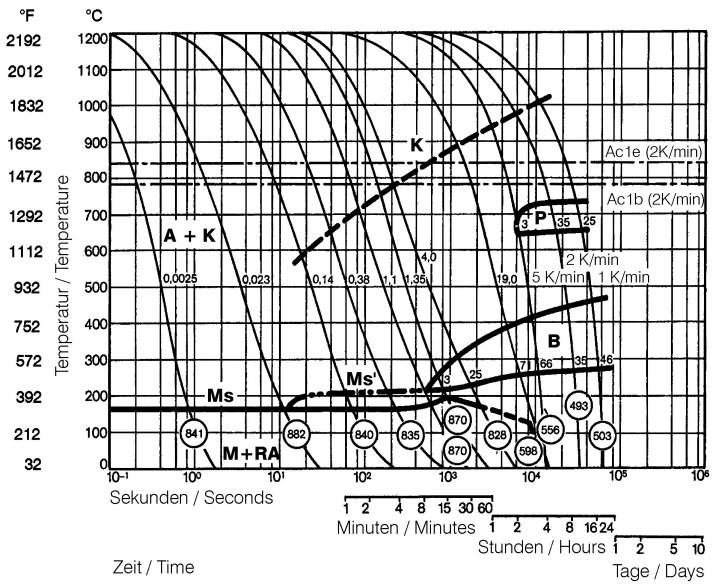
Stress relieving

Temperature	600 to 650 °C	Slow cooling in furnace. || To relieve stresses set up by extensive machining or in tools of intricate shape. || After through heating, hold in neutral atmosphere for 1 to 2 hours.

Hardening and Tempering

Temperature	1,190 to 1,230 °C	Salt bath, vacuum || Preheating: 1st stage ~ 500 °C, 2nd stage ~ 850 °C, 3rd stage ~1050 °C || Austenitising: 1190 - 1230 °C, holding time after complete heating 80 seconds, maximum 150 seconds, to avoid material damage due to overheating.|| Quenching: oil, warm bath (500 - 550 °C), gas
Temperature	550 to 570 °C	Slow heating to tempering temperature immediately after austenitising. || Dwell time in the furnace 1 hour per 20 mm material thickness (at least 1 hour) || Slow cooling to room temperature || 3 tempering cycles recommended || Hardness see tempering chart

Continuous cooling CCT curves



Austenitising temperature: 1200°C (2192°F)
Holding time: 180 seconds
